

SPREAD LOVE & KINDNESS!

You can use these happy Ocean cards in so many ways! They're great for holidays, celebrations, and anything you can think of. We've included several suggestions to get you started. Have fun coloring and getting creative!

Tip: You don't need to print this sheet. In your print settings, you can specify which page to print. Select page 2 if you just want to print the cards.

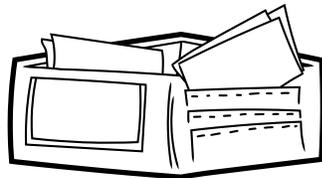

Cut-out each card and you'll have eight options to give to people!

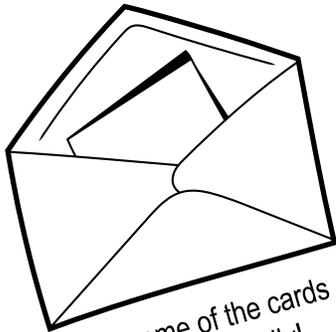

Cut-out each row of cards (there are 4 rows) and create a folded card option or a complete booklet of uplifting art!

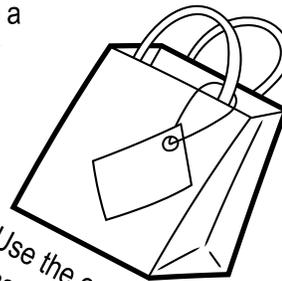

Customize the blank sides with whatever you wish!

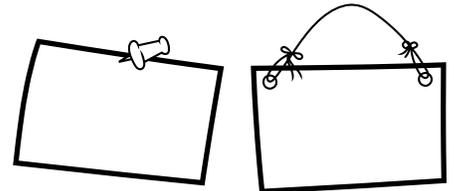

Individual and folded cards will fit into most wallets, pockets, purses, etc. Keep a few on-hand to randomly brighten someone's day!

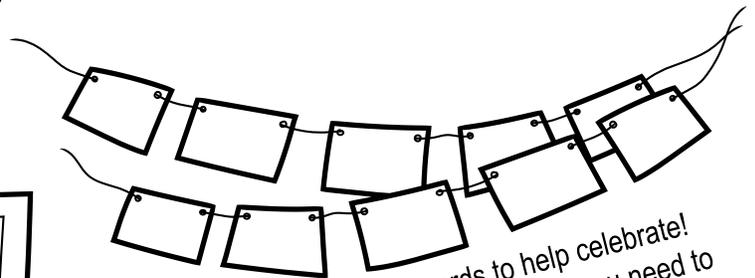

Mail some of the cards to friends/family!

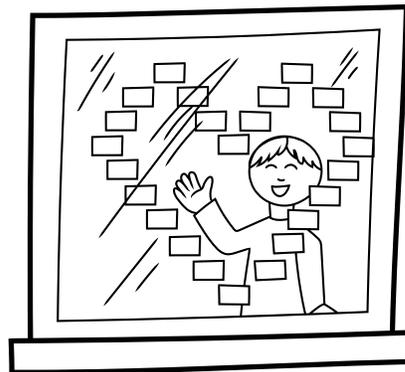

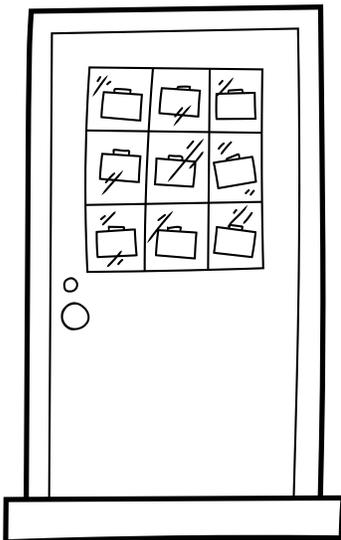

Use the cards as gift tags!

Display a few cards where you'll see them each day. Anytime you need a smile, just look at those cards.

Use the cards to help celebrate! Print/color as many as you need to create a string of garland.

You can decorate with these cards! Print and color as many as you need!

This is a great way to ID them.

The wingspan of a Manta Ray can reach 20-29 feet (6-8.8 m) in length! Lemon sharks have two dorsal fins, with the second one almost as big as the first.

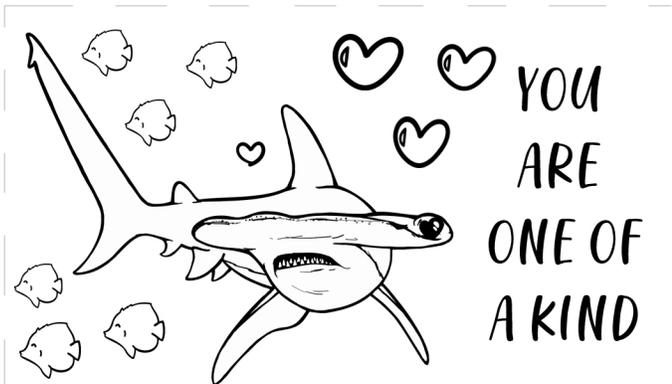

Lemon sharks are so flexible, they can bite their own tail. Whale sharks filter feed like a big underwater vacuum (sucking up plankton).

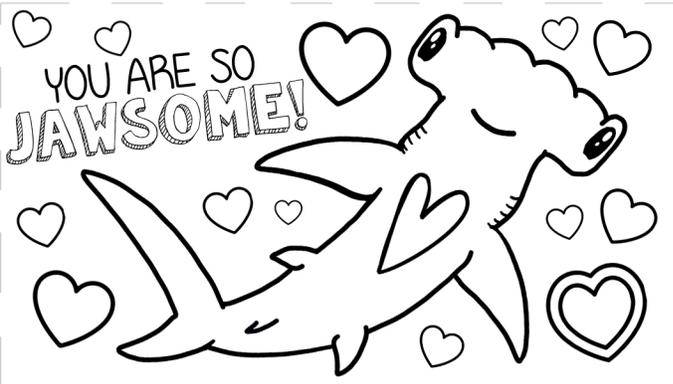

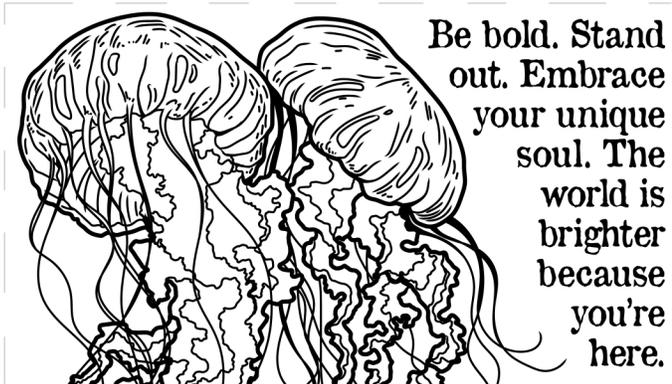

Manta Rays have the largest brain-to-body weight ratio of any living fish (they're super smart!)

Each individual Spotted Eagle Ray has a completely unique spot pattern just like a fingerprint.

Great Hammerheads are the largest species of Hammerhead. Their unique head is called the cephalofoil.

Unlike other sharks, the Great Hammerhead's dorsal fin is larger than their pectoral fins.

Cut along the dashed lines to cut out a row of two cards (and fold in half) or cut out each card individually! Check out 'page 1' for ideas!
